TITLE : EXPANSION PIPE JOINT AND
 ASSEMBLING METHOD FOR
 EXPANSION PIPE JOINT

ABSTRACT : PROBLEM TO BE SOLVED: To lower the cost of an expansion pipe joint by weight reduction and miniaturization while shortening a second cylindrical body.

SOLUTION: In the expansion pipe joint equipped with a first cylindrical body 1, a second cylindrical body 2 to be inserted along the cylindrical axis X of the first cylindrical body 1, a sealing member 3 interposed between the first cylindrical body 1 and the second cylindrical body 2, and with locking mechanisms 6 and 7 regulating the relative movement along the cylindrical axis X between the first cylindrical body 1 and the second cylindrical body 2, the sealing member 3 is mounted to the insertion port side of the first cylindrical body 1, the locking mechanisms 6 and 7 are formed up in a place deeper than the sealing member 3, and they are so constituted that the sealing member 3 can be mounted thereto after members forming up the locking mechanisms 6 and 7 have been mounted, and a bayonet ring 5 is provided thereto, which prevents the sealing member 3 from falling down out of the aforesaid insertion port.
